

OneGrid — Persona & Value Map

A one-page guide to who benefits from the OneGrid demo across an oil, gas & energy organization — and how to pitch it to each.

What OneGrid is: a Digital-Twin + weather-risk asset-intelligence app on **Microsoft Fabric** (Eventhouse telemetry, Direct Lake / Import semantic model, Digital Twin Builder ontology) with an **Azure AI Foundry**-grounded Copilot. It stitches together the full decision chain — **executive KPIs** → **operational risk** → **equipment health** → **the wrench turn** — for a diverse estate (offshore platforms, wells, pipelines, LNG, terminals, refineries, thermal power plants).

The one-line pitch

"One governed platform that tells your CIO the fleet is exposed, tells your reliability engineer which bearing is failing, and tells your technician which manual to open — from the same data."

Persona → value map

1. C-suite / Executive — the "why this matters" story

Role	Screen that lands	Value narrative
CIO / CTO	Whole stack: Fabric → Direct Lake → 3D app + Copilot, one-click deploy	Consolidate historian + weather + work management + AI on one governed platform — no integration sprawl.
CDO / Head of Data & Analytics	Eventhouse, semantic model, ontology, lineage	Real medallion/lakehouse data-product + governance pattern.
COO	Command Center fleet view + Response Posture + storm exposure	Single pane: "how exposed is my fleet, and are we ready?"
Chief Risk / Resilience Officer	Hurricane track, cone, wind fields, asset risk + lead-time	Quantified climate / physical-risk to operations and capital.
CFO / Insurance & Risk Finance	\$ assets-at-risk, outage history, predicted trips	Loss avoidance, downtime cost, parametric-insurance framing.
Chief HSE / Sustainability	Storm preparedness, shutdown lead-time, critical-asset flags	Safety-critical protection; evacuation / curtailment decisions.

2. Digital / IT leadership — the buyers & builders

Role	Demo hook	Value
VP Digital / Transformation	"Accelerator you clone and deploy"	Fast time-to-value blueprint for OT/IT convergence.
Enterprise / Solution Architect	Fabric + Foundry reference architecture, managed identity, RBAC	Reusable, secure pattern.
Head of Cloud / Platform	App Service + managed identity + Fabric capacity	Ops model, cost, scaling.

3. Operations leadership — the daily owners

Role	Demo hook	Value
VP Operations / Asset Management	Fleet health + exposure + posture across the estate	Prioritize across a diverse portfolio.
Plant / Facility / Asset Manager	Site → Unit → Equipment drill-down, per-site risk	"What in <i>my</i> plant is critical this week?"
Operations / Production Manager	Predicted trips, RUL, curtailment planning	Protect production; plan around weather windows.

4. Reliability & Maintenance engineering — the deepest, most credible fit

Role	Demo hook	Value
Reliability Engineer	Digital-twin hotspots, survival curves, anomaly advisories (peak-z), AAKR health, root cause	Condition-based / predictive maintenance in one view.
Rotating-Equipment / Condition-Monitoring Eng.	3D equipment twins with per-zone live readings (bearings, casings, seals)	Vibration/temperature diagnostics tied to geometry.
Maintenance Manager	Open work orders, WO summary, predicted failures	Backlog prioritization by risk + weather.
Maintenance Planner / Scheduler	Lead-time to impact + "next weather window" recommendation	Schedule inspections/turnarounds intelligently.

5. Control room & emergency response — the "live ops" fit

Role	Demo hook	Value
Control Room Operator (Digital Twin Control Room)	Live alert stream → click to open 3D diagnostic	Real-time situational awareness.
Emergency Mgmt / Business Continuity / Storm Desk	Storm selector, cone, posture, lead-time countdown	Ride-out vs shutdown decisions; resource staging.
Dispatcher / Ops Center	Asset map with all active storms + risk gradient	Coordinate crews and curtailment.

6. Frontline / field — the "wrench turn" fit

Role	Demo hook	Value
Maintenance Technician / Mechanic	Recommended action + "Click here for the Manual" (Foundry IQ)	Guided fix; right procedure at the asset.
Field / Wellsite / Platform Operator	Asset health colors, exposure flags	Know what to watch/secure before a storm.
Turnaround / Outage Coordinator	Outage history + predicted trips + work orders	Plan shutdowns and scope.

Cross-cutting — the Copilot / "Ask Data" persona

The grounded chat (weather + exposure + outages + work orders, with a **persona selector**) is the great equalizer:

- **Exec:** "Which assets are most at risk in the next 72 hours?" - **Planner:** "What's my open backlog on Thunder Horse?"
- **Technician:** "What's wrong with RV3 and how do I fix it?"

Same data, role-appropriate answer. Demoing the persona switch shows one platform serving all six tiers.

Demo script by audience (2–3 minutes each)

Executives — Open on the **Command Center 3D map with a hurricane bearing down** → "\$X of critical assets, Y hours to impact." Emotional + quantified. Close with the one-click deploy / one-platform message.

Reliability & Maintenance — Go to **Asset Explorer** → **a Steam Turbine** → **open the 3D twin**. Show per-zone readings (HP casing, IP section, LP exhaust, bearings, rotor), the **survival curve + RUL, root cause**, then the **"open the manual"** link. This is a day-job tool, not eye candy.

Control room / Emergency — Show the **live alert stream** → **click an alert** → **3D diagnostic**, then flip to **Risk** (storm selector) and **Response Posture** with the lead-time countdown. This is the "operational nervous system."

Field / Frontline — Keep it to **health color** → **recommended action** → **manual**. Anything more is noise at the asset.

IT / Data — Walk the **Fabric workspace** (Eventhouse, semantic model, ontology) and the **deploy wizard**; emphasize managed identity, governance, and "no bespoke integrations."

Feature → screen reference

Capability	Where in the app
Fleet overview + 3D holographic map	Command Center (/webapp/app)
Site→Unit→Equipment hierarchy + 3D twins	Asset Explorer (/webapp/app/asset-explorer)
Live telemetry + alert stream	Digital Twin Control Room (/webapp/app/control-room)
Storm track / cone / wind / asset risk	Risk (/webapp/app/risk)
Readiness & shutdown lead-time	Response Posture (/webapp/app/posture)
Survival / RUL / root cause / forecast	Simulation
Work orders + equipment manuals	Maintenance (/webapp/app/maintenance)
Grounded Q&A with personas	OneGrid Copilot dock (all pages)

Audience: sales, pre-sales, and demo enablement. Pair with a live deployment for maximum impact.
